

## Enj Ver. 8.0

Bala Cynwyd, PA – Enj Ver 8.0 and its releases make Enj feature packed.

### About Enj

Enj is a leading Business Process Management (BPM) product from BISIL that enables organizations to automate and manage business processes.

BISIL's Enj is a comprehensive Enterprise Business Process Management Platform that enables organizations to attain a higher level of agility and efficiency by helping automate processes as well as providing a system to govern and monitor the efficiency of the processes employed. Enj incorporates a full business process life-cycle connecting "people with people", "systems with people" and "systems with systems". It combines capabilities of Work Flow, Transaction Management, and Document Management in one system that is browser-based, user friendly, scalable, and has a service oriented architecture (SOA).

### SOA and Web Service infrastructure

The web services, SOA infrastructure continues to extend to different aspects of Enj. In Q1 08 this infrastructure extended to components of Enj like look-ups, query parameters and several others.

### Reporting Capability

There were several feature additions to the reporting module in Enj. This includes enhancements like provision of tabbed reporting; improvements in online query parameter specification capabilities; improvements in linkages to web-service and SOA Infrastructure in Enj; Matrix reporting; enhanced ajax reports and integrity checks in reports designer and rollback among others.

### Security

Several enhancements in the area of password management were added.

### Enj-Portal

The interface capabilities of the portal component have undergone significant improvements that are now possible due to improvements in presentation capabilities of browsers. This includes capability to handle conditional displays; increased support for and usage of Ajax technology; enhancements to the Portal API so that users can implement custom elements for their specific situation and requirements; improved support for automatically refreshing displays; automated features in user management.

Vastly enhanced search capability – Index and Search ability for users, processes, reports on item name for faster search

### Transact

Included increased support for

- Different kinds of serial number control and rules
- Visibility of system generated serial controls
- Automatic notifications and document content
- Scheduler scope and capabilities
- An improved UI for scheduler
- Enhancement to ensure feature set compatibility across browsers
- Addition to character set handling capabilities like – case sensitivity, special characters and date formats.

These features significantly expand Enj's transaction processing capabilities.

- A higher level of sophistication in managing forms and changes in forms.
- Significant expansion in routing rules, and example is the ability of Enj to route items across to multiple roles and users based on rules
- New Inbox with improved UI like greater control over 'subjects' in documents; completing documents through Inbox without opening; personalizing Inbox; control over buttons; inbox refresh attributes.

### Designer

- Provided more options for action events in a human interface
- Routing rules capability enhanced to route documents to multiple destinations
- Expanding the number of identifying attributes that can be specified for a transaction. This makes Enj much more user friendly
- One of the atypical objects provided with Enj-Designer is the item-set. This has been enhanced in Q1'08 to provide a hybrid view, i.e. a combination of grid and form type display.

### Reports

- Enhancements in Matrix report and graph reports
- Improved deployment UI capability to make it easier for users to see reports and queries for different parameters
- The reporting module has been brought under the ambit of Ajax technologies. This has had a many fold effect. Not only has it increased the speed of reports but it has provided many additional features that make report generation, viewing, filtering, sorting, pagination much more elegant and simple

### Personalization

- Expanded the scope of personalization to include attributes like refresh frequency rates for Inbox and Reports
- Calendar feature activation and enhancements
- Better encryption and security features for password
- Ajax implementation in Roles and Catalog listings; Pagination in catalogs
